Can we really learn to be happy? Yes, we can. Each semester, nearly 1,400 students sign up for Harvard professor Tal Ben-Shahar's life-changing class, "How to Get Happy." Currently it's the hottest course at Harvard, taken by twenty

percent of its graduates. In *Happier*, Professor Ben-Shahar brings the ideas of the Ivory Tower to Main Street, distilling the lessons and exercises from his course into a slim volume of practical wisdom. Grounded in the Positive Psychology movement, based on years of researching the works of scientists, academics, and philosophers, *Happier* emphasizes the importance of pursuing a life of both pleasure and meaning.

From Publishers Weekly Though everyone wants to be happier, how many of us can actually define what that means? In his class, "Positive Psychology," one of the most popular courses at Harvard University, Ben-Shahar teaches that happiness isn't as elusive a concept as people think, and can actually be learned; he commits the fundamentals of his course to paper in this primer on getting happy, which he defines as a combination of pleasure (short-term happiness) and meaning (long-term). Divided into three parts, "What is Happiness?", "Happiness Applied" and "Meditations on Happiness," Ben-Shahar provides insight and exercises, prodding reflection in readers ("Do you accept negative emotions as natural?" "Do you see your work as a job, a career, or a calling?") while explicating the relationships among happiness, motivation and goals. Though it sounds simple, Ben-Shahar insists on keen self-awareness and purposeful action to overcome entrenched patterns of despondency and/or disbelief. For answer-seekers, this is definitely a good start. Copyright Reed Business Information, a division of Reed Elsevier Inc. All rights reserved.
